YAO QING INDUSTRIAL

## COMPANY PROFILE

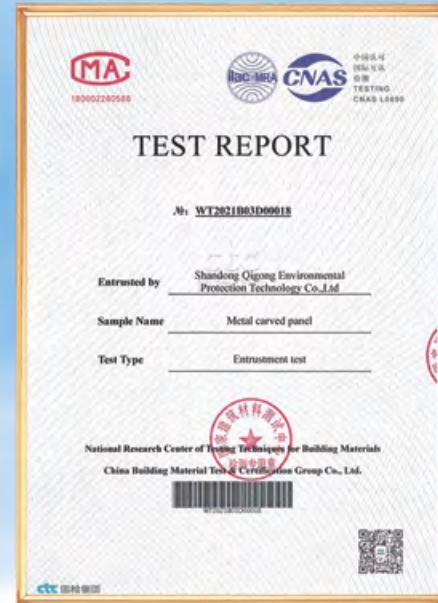

Yao Qing Industrial Limited is an international enterprise headquartered in Hong Kong, specializing in the design, research and development, production, and sales of high-performance metal carved panels, providing innovative building enclosure solutions for the global construction market. We have an advanced self owned manufacturing base located in Zhangqiu District, Jinan, China, integrating cutting-edge research and development capabilities with strong production resources to ensure the provision of high-quality products that meet international standards.

Our own advanced manufacturing base (Jinan, China): We operate a high-tech manufacturing base equipped with intelligent production lines in Zhangqiu District, Jinan, focusing on the design, research and development, and production of metal carved panels, prefabricated buildings, and booths. The base holds multiple national patents and strictly adheres to international environmental standards (such as greenhouse gas emission verification reports) and quality certification systems.

Hong Kong Headquarters – Global Operations Center: With the advantages of Hong Kong as an international logistics and financial center, we focus on global market development, cross-border supply chain management, and technical consulting services. Our mission is to seamlessly connect the excellent manufacturing capabilities of our own factories with overseas demand, providing customized solutions for global commercial, residential, and industrial projects.

Metal Carved Board

Green Technology

## PRODUCT DESCRIPTION

Metal carving boards are made of environmentally friendly materials (inner polyurethane layer is the same material as refrigerator and air conditioning insulation layer). They are non-toxic, odorless and pollution-free. They provide green protection and decoration for buildings. The surface is a high quality color relief veneer metal plate with special layer treatment, the middle layer is a rigid high density polyurethane foam thermal insulation layer with flame retardant treatment, and the bottom layer is an aluminium foil protective layer with thermal insulation, thermal insulation and moisture-proof function. Because the wallboard itself has the characteristics of thermal insulation, waterproof and flame retardant, light anti-seismic, convenient construction, sound insulation and noise reduction, green environmental protection, beautiful and durable, and because of its simple and practical plate assembly method, not limited by seasonal environment, so the installation and use is very safe and convenient, suitable for all seasons. This innovative exterior wall thermal insulation decoration board highlights its advantages.

This material has decoration and heat preservation function. By embossing and baking aluminized zinc plate, it can form more than 100 kinds of art decoration effects, such as red wood grain, brick grain, bark grain, cultural stone, marble, mosaic, etc. Metal carving board effectively solves the problem of single function of traditional material and synchronizes the decoration of external wall with heat insulation. In summer, the indoor temperature is 3-5 degrees lower than that of ordinary buildings, and it only takes about 5-8 years for the houses decorated with metal carved boards to recover the cost of materials in terms of air conditioning and cooling.

## PRODUCT FEATURES

### Thermal insulation, consumption reduction and energy saving

Compared with traditional exterior wall panels, metal carved panels have better heat preservation and heat insulation functions.

### Convenient installation

The installation method of metal carving board is simple, not affected by the season and weather.

### Implement energy saving and environmental protection concepts

The metal carved board has stable chemical and physical structure, no pollution, and long service life.

### Sound insulation and noise reduction, quiet and comfortable

The metal carved board is a closed bubble structure, which has a significant sound insulation effect.

### Waterproof and moisture-proof performance is stable

The metal carved board is processed by special process, with good waterproof performance and high material stability.

### Light texture and obvious shockproof effect

The metal carved board has been treated with a special process and has strong shock and crack resistance characteristics.

### Flame retardant properties

The core material has been specially treated to have good fire and flame retardant properties.

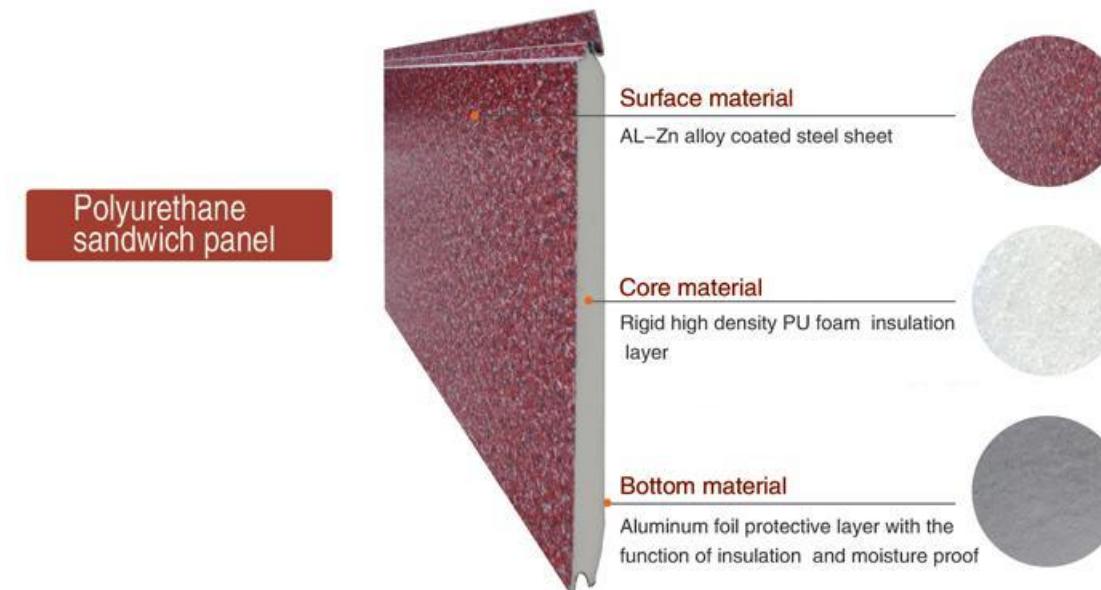

### Many patterns and colorful

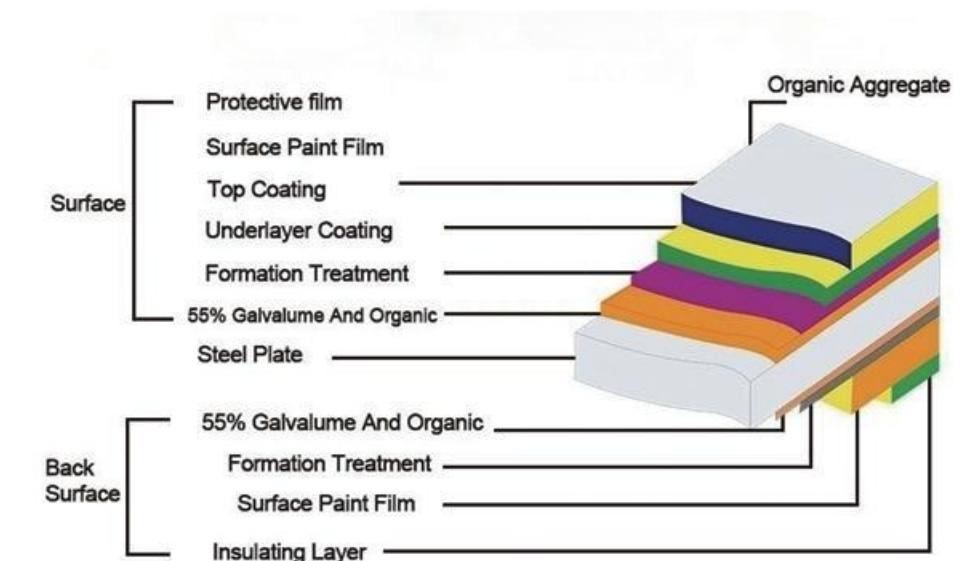

There are many kinds of metal carving boards, you can choose from more than 100 different carving patterns and background colors.

## ● Middle ditch series

## Packing specification

Weight	3.7kg/m <sup>2</sup>
Length	customized
Width	383mm
Thickness	standard 16mm
Area of each piece	1.532m <sup>2</sup>
Standard size	4000 × 383 × 16mm
Packing size	4000 × 415 × 165mm
Package quantity	10 pieces/carton
